

## PERDUE FARMS CORPORATE HEADQUARTERS

SALISBURY, MARYLAND

Gillis Gilkerson completed a 95,000 square foot renovation to Perdue Farms' Corporate office building in Salisbury, Maryland in May 2013. The project included six phases and was delivered two months early. Throughout the construction process, all divisions remained fully functional and occupied. Initially, Gillis Gilkerson set a goal of obtaining the Leadership in Energy and Environmental Design (LEED) Gold-level certification. By completion, this goal was surpassed; the project obtained LEED's highest level of certification, Platinum. Throughout the build, Gillis Gilkerson also worked alongside mechanical and electrical engineers from AWB Engineers to create and design a highly efficient VRF HVAC system.
