

## VALLEY PROTEINS

LINKWOOD, MARYLAND

---

Gillis Gilkerson completed a multi-faceted construction project for Valley Proteins, an industrial user located at 5420 Linkwood Road in Linkwood, Maryland. The scope of work encompassed the construction of a +/- 20,000 square foot metal building with split face masonry, a +/- 1,000 square foot pre-cast concrete building and a +/- 9,000 square foot conventional steel and masonry building. Each of the new structures serves a unique purpose, from vehicle maintenance and washing, to general office use. Additionally, Gillis Gilkerson installed specialized truck lifts, a fueling station and a truck scale.

Understanding the unique nature of Valley Proteins operations enabled Gillis Gilkerson to deliver a final product that ensured the business increased productivity and efficiency for years to come. Quality construction and thoughtful design allows GGI customers to see an increased return on investment over the life of their properties.

The project was led by Gillis Gilkerson Project Manager, Matt Esham along with Construction Superintendent, Chris Deinlein.
