

NOVACARE REHABILITATION

DELMAR, DELAWARE

Gillis Gilkerson was hired to complete a 2,000 square foot build-out for NovaCare Rehabilitation at 38552 Sussex Highway, Unit 102 in Delmar, Delaware. The location will provide access to state-of-the-art medical equipment and programs for patients in need of physical, occupational and hand therapies, sports medicine, and work health services.

The facility features private and multi-patient treatment rooms, an open gym, administration area, offices, and an employee break room. The exterior is complete with an Exterior Insulation and Finish System (EIFS) which offers continuous insulation designed to meet evolving building and energy codes.

“We are excited for NovaCare as they continue to expand throughout the Southern Delaware region,” said Dwight Miller, Executive Consultant for Gillis Gilkerson. “We recognize the benefits this company brings to the communities it operates in. Not only do they base their services on community needs, they also hire local residents to staff their centers.”

Project Manager Don Murray led construction operations with on-site support provided by Superintendent Don Brady.

“This was the most seamless build out that I have ever been a part of. Gillis Gilkerson was ahead of the game with a punch list, they were always prepared and delivered an inviting, upscale space for our patients to recover comfortably and gain back their independence.”
