

## BERLIN ORAL SURGERY

BERLIN, MARYLAND

Gillis Gilkerson completed construction of a brand-new oral surgery center in an existing medical office building located at 314 Franklin Avenue in Berlin, Maryland for Berlin Oral Surgery. More complex than a typical dental office, Berlin Oral Surgery offers dental implants, extractions, sinus augmentation, bone grafting and facial trauma reconstruction, requiring med-gas fit-out appropriate for the Level II surgery center.

The +/- 5,600 square foot renovation transformed the space to create five surgery rooms, three exam rooms, three post-treatment rooms, a lab for instrument prep and sterilization, an imaging area, nurses station, waiting and reception area, offices, and staff break-room. The project was spearheaded by Gillis Gilkerson Project Manager Mike Truitt and Superintendent Bruce West.

Gillis Gilkerson was able to leverage its extensive experience with dental office and medical office construction, renovation and tenant fit-outs to ensure the project reached completion, on-time and on-budget.
