

CUSTOM CABLE SOLUTIONS, INC

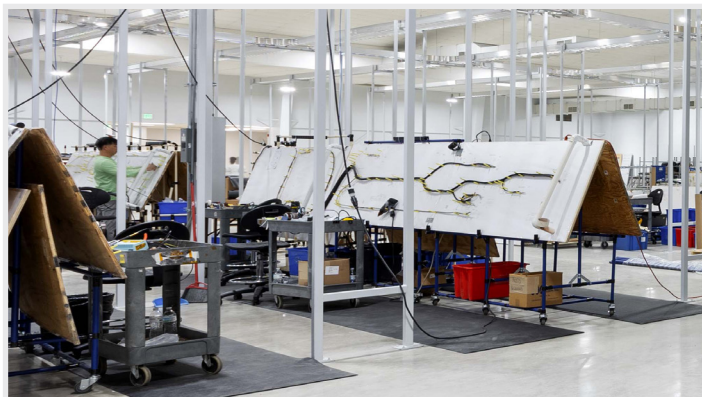

SALISBURY, MARYLAND

When Custom Cable Solutions, Inc. (CCSI) identified a new location for their ISO 9001:2015, AS9100D, and IQNET certified state-of-the-art manufacturing facility, they trusted Gillis Gilkerson to complete renovations to the 44,000 square foot space within an astounding 8-week window, allowing the company to transfer operations without disruption to production.

CCSI employs a staff of over 100 certified assembly technicians, mechanical and electrical engineers, quality and testing technicians and interconnect industry professionals delivering engineered cable assembly solutions to many of the world's best-known military contractors, aircraft manufacturers, and medical diagnostic equipment leaders.

The whole building required renovation to create the reception and office spaces, a shipping and receiving area, and a +/- 30,000 square foot manufacturing floor. The production area was completely gutted and floors polished, while new electrical services were installed. The manufacturing floor relies on custom-made stanchions to support cable trays that provide overhead power access to the many workstations.

Gillis Gilkerson was able to deliver the completed project ahead of the 8-week turnaround by calling upon its network of trusted trade partners. "Seamless communication between top-notch professionals was the key to this project's success," said Gillis Gilkerson Project Manager Don Murray.
