

SHORE REGIONAL EYE CARE

BERLIN, MARYLAND

Gillis Gilkerson began working with Shore Regional Eye Care to assist them with the tenant fit-out for their new office located at 9956 N. Main Street, Unit 4 in the Berlin Main Place medical office complex. Interior updates were made to ensure the practice maximized the functionality of its layout, while also bringing an updated aesthetic to the unit. Crisp white casework with complimentary bead board reception counters and wainscoting paired with light colored wood flooring brightened the space to create a welcoming atmosphere. Bold blue accent walls were used to add personality and create focal points throughout the space to make each area feel dynamic and interesting.

While renovations to the Shore Regional Eye Care medical office were nearing completion, the practice owners identified a space to create a separate surgical suite in an adjacent building in the Berlin Main Place complex.

"We had established a strong working relationship with Shore Regional Eye Care when the opportunity for the surgical suite came up," explained Gillis Gilkerson Project Manager and Superintendent Don Murray. "We already knew what they were looking for, so we brought in an architect, and ended up leading the surgery center fit-out in more of a design/build format, which enabled us to finish the project very quickly."

Shore Regional Eye Surgery Center's design mirrors the medical office, with the addition of large glass walls surrounding the two procedure rooms, and the patient comfort areas. Shore Regional Eye Care celebrated with a ribbon cutting for both spaces in October 2025.
